

ECONOMICAL OUTSOURCING IN THE ISGUS CLOUD

ISGUS data centre proves its worth

Plukon had looked at ISGUS's competitors, but only ISGUS was able to offer software as a service in line with the requirements profile: The customer no longer hosts the desired software solutions in their own IT, but in the ISGUS Cloud. The customer no longer needs to worry about the computer environment, database licences and operating systems. The entire technical administration is also part of the SaaS service. This ensures transparency in the IT budget and improves the cost structure. „We can outsource

time recording and access control with a clear conscience because we don't earn any money with it. It is not part of our core business and the outsourcing does not involve any business-critical data," says Stefan Berning, emphasising the usefulness of outsourcing. The all-round good cooperation with the ISGUS team from Osnabrück, who presented themselves as technically adept, flexible and service-orientated, also fits in with this.

„T&A is not the first product that we have outsourced. We pass on the risk of a system failure and don't have to worry about backups, server maintenance or administration.“

Mr. Stefan Berning from Plukon

Implementation during ongoing production

Plukon introduced ZEUS® Time and Attendance and Access Control during ongoing operations. The terminals were installed at weekends to minimise the impact on production operations. The introduction went smoothly and no two systems were used at any time. Stefan Tholen, Senior Application Manager at Plukon, reports a well synchronised hardware introduction. Overall, the implementation during ongoing production was positive and successful.

Transparent working hours

Plukon uses ZEUS® Time and Attendance to make working hours more transparent. The payroll data is automatically imported from ZEUS® into the SAGE payroll programme and incorrect postings or problems are displayed on the ISGUS dashboard almost in real time. ZEUS® Access Control is installed at three locations with a total of 90 terminals and some of these terminals are also used for cost centre changes. The group calendar is mainly used by foremen, production managers and department heads to plan absences. The ZEUS® analyses are very important for the management as they are very informative and help with the company's development.

Overall, the new transparency thanks to ZEUS® Time and Attendance is rated positively.

CHALLENGE

The roll-out of ZEUS® Time and Attendance and Access Control took place during ongoing operations. Accordingly, the access and time recording terminals were installed on Fridays and at weekends.

INDUSTRY

Manufacturer in the meat industry
International company
Approx. 9,000 employees
Turnover in 2022 was 2.8 billion euros

SOLUTION

With ZEUS® Time and Attendance and Access Control in the ISGUS Cloud, Plukon has found a software provider in ISGUS that guarantees high availability and ensures data security.
